I bought an IPad for the Company Jet a few days ago with the sole aim of using it with the new Jeppesen Mobile TC App as it is the most step forward in my rainfall. All other airlines drive to reduce visual clutter on the map. This feature works in both preflight planning modes and in the air. The ADL 100 and 150 provide GPS and satellite weather, while the 190 and 200 add ADS-B traffic and AHRS for backup attitude.

The AIR Connect receives traffic and GPS data from other aviation in your panel and transmits them to ForeFlight via Wi-Fi, allowing you to leverage existing units in your panel for use with ForeFlight.
